08/2016 - 04/2020   *CGPA - 8.15*

XII
DAV Matric Higher Secondary School

06/2014 - 04/2016   *Score - 1171/1200*

WORK EXPERIENCE

Technical Analyst II
Bank Of America Continuum India Pvt Ltd

04/2022 - Present   *Chennai*

Responsibilities

- Having moved into the Level 3 Support, we were the point of contact when major code issues post releases occur. Before reaching to the Development team, we debug the code to understand the issue.

- Apart from handling triages, we used to work on long ongoing issues which are being reported from Production related to earlier release versions.

- We closely work with the Development team to understand the updates/fixes being made with every release.

Technical Analyst I
Bank Of America Continuum India Pvt Ltd

08/2020 - 04/2022   *Chennai*

Responsibilities

- The major responsibility here was to coordinate with the Middleware and Level 1 teams to successfully push new code changes/fixes into Production. We validate the in-house application's functionalities as well as the servers health post release.

- We would be the first Point of Contact whenever Tickets are raised as a result of some errors/bugs thrown during the usage of our App.

SKILLS

Programming Language - JAVA   Database- SQL

Framework and Library - Spring Boot   VCS - GIT

Tools - Postman

PROJECTS

Blogging App (Clone of MEDIUM.COM) BACKEND : JAVA | Spring Boot | PostgreSQL

- A Web Based Application where Users can Write Blogs, Add Comments on Articles, Follow Each Other along with many other features.

- Achieved Session Management using JWT's and secured the private API Endpoints which require authorization via these JWT's. Some features which are secured : Editing of Articles/Deleting the Comments on Articles/Posting a new Article/Comment.

- Dockerized the application, and used AWS LightSail to run the container. Pointed my domains IP to the LightSail instance created.

- Source Code : https://github.com/Aravindravi1209/blogApp

Ticketing System (Clone of BOOKMYSHOW.COM) BACKEND : JAVA | Spring Boot | PostgreSQL

- A Command Line Runner Application which supports features including Booking tickets, Register users/movies/theatres.

- The project was built to achieve the Concurrency when multiple bookings happen for the same seat at the same time -> Achieved using Transactions along with the Isolation of Serializable. Tested the working using Multi Threading.
